

# Versatile Heathers

These heathers, also called Bud Bloomers, bud up but flowers do not open, resulting in a long flowering time from late Summer to Winter.

With their wide colour range and long blooming period, the Gardengirls® are ideal for providing autumnal decoration, particularly in tubs, bowls, window-boxes etc. together with other suitable plants.

They can, of course, also be planted directly in the ground to bring fantastic colour instantly to your garden.

Gardengirls® are easy to care for, requiring no feeding, just water to keep them moist. If you are growing them, use an ericaceous compost.
